⚡ ENTERPRISE HIGHWAY FLEET INTELLIGENCE

Fuel-Check & Disha Compass Platform

The intelligent operating system for commercial freight transport—unifying algorithmic route refueling, interstate fuel VAT arbitrage, predictive weather safety, and multilingual driver AI.

₹1,400+	O(V + E)	4 Langs	0.06s
TAX SAVINGS PER FILL	LINEAR DP SOLVER	EN • ≡≡≡≡≡≡ • ≡≡≡≡≡ • □□□□□□	CACHED API RESPONSE

Compounding Friction in Long-Haul Logistics

Commercial fleets and highway truck operators face multi-layered inefficiencies that bleed margins and risk driver safety.

Interstate Fuel Tax Disparity

State diesel prices swing wildly (₹87.6/L in Delhi vs ₹92.4/L in Maharashtra). Fleets lose over ₹40 Lakhs monthly by refueling on the wrong side of state borders.

Up to ₹5/Liter Loss

Unpredicted Highway Hazards

50+ km/h crosswinds, flash monsoon flooding, and road disruptions occur without proactive warning, causing vehicle rollovers, cargo damage, and costly transit delays.

4.2 hrs Average Delay

Driver Language Barriers

Commercial drivers cross multilingual corridors speaking Hindi, Tamil, or Telugu. Navigating complex touchscreens while driving a 40-ton vehicle creates severe accident hazards.

High Cognitive Load

Fragmented Dispatch & SOS

Paper Bilti (consignments), uncoordinated tyre puncture breakdowns, and disconnected emergency trauma centers leave drivers stranded during night-time highway crises.

Zero Unified Hotline

A Unified Fleet Intelligence Ecosystem

Fuel-Check converges mathematical graph routing, live taxation feeds, acoustic AI, and digital consignment into one platform.

1. Algorithmic Refueling Solver

Constructs a forward-only Directed Acyclic Graph (DAG) along the route polyline and runs Dynamic Programming to minimize total fuel expense under 500-mile range limits.

≤ 2.5s Execution Time

2. State VAT Arbitrage Engine

Integrates daily 6:00 AM Oil Marketing Company (OMC) benchmark rates. Proactively directs drivers to tank up at low-tax border plazas (e.g. Haryana or Gujarat) before entering high-tax states.

Direct Bottom-Line ROI

3. Disha Multilingual AI Voice

Acoustic co-pilot natively speaking Hindi, Tamil, Telugu, and English powered by Sarvam AI & AWS Bedrock. Answers questions on diesel bunks, dhabas, mechanics, and medical emergencies.

100% Hands-Free Driving

4. Predictive Weather Hazards

Batch samples meteorological models at future arrival-time checkpoints via Open-Meteo, triggering instant speed warnings for high winds, downpours, or black ice.

Proactive Cargo Safety

5. Commercial Bilti (Waybill)

Instant digital generation of commercial waybills with unique manifest IDs, fuel volume audits, tax savings breakdown, and 80-column printable ASCII output for cab thermal printers.

Paperless Dispatch

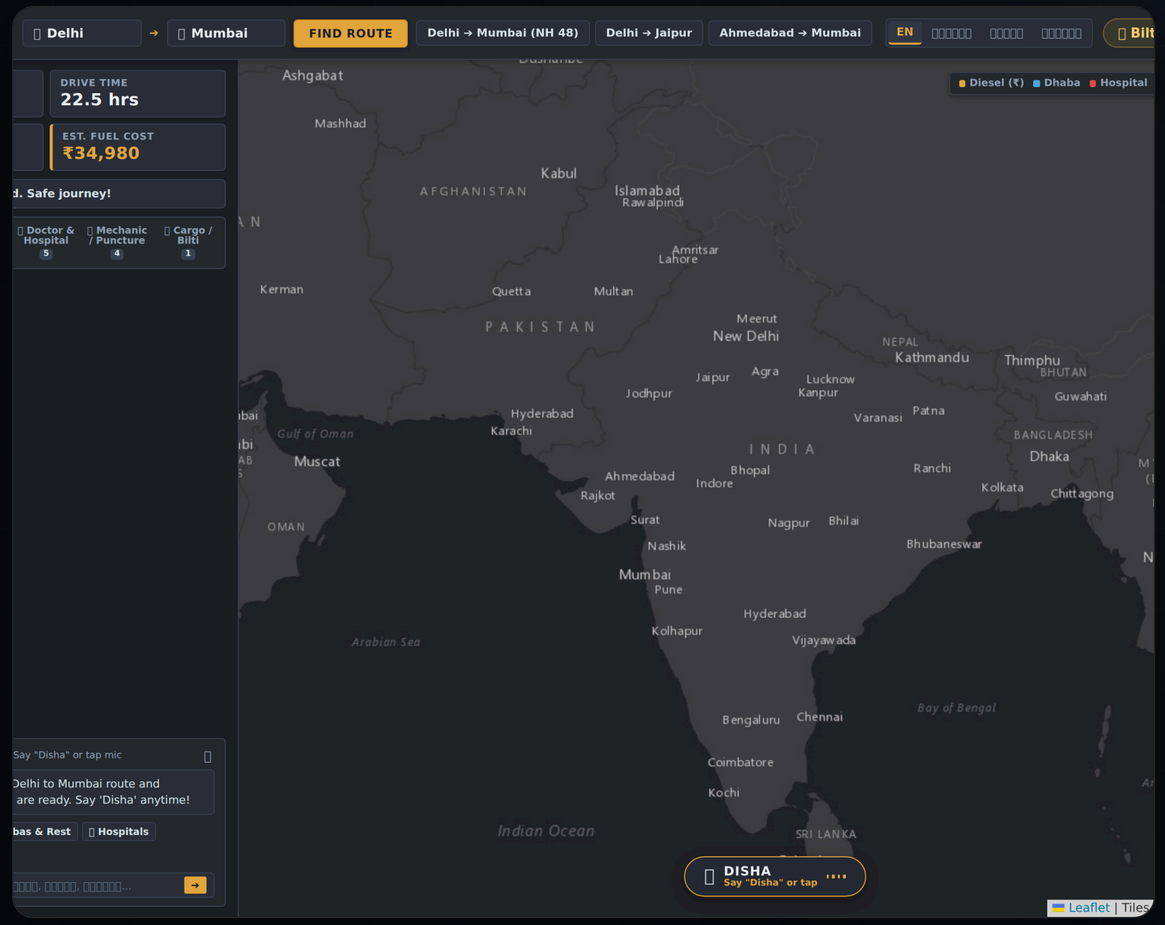

6. Highway Emergency Network

One-click reservation of verified highway dhabas, mobile puncture/mechanic dispatch, emergency trauma hospital alerts, and 1-tap SOS to National 112 / 1033 NHAI hotlines.

Integrated 112 / 1033 NHAI

Single-Plane Geospatial Driver Cockpit

Engineered specifically for in-cab displays and fleet dispatcher screens: 100vh zero-scroll layout with real-time route telemetry.

National Highway Corridors

One-click chips for Delhi → Mumbai (NH 48), Delhi → Jaipur, Ahmedabad → Mumbai, and South-Central corridors.

Live Telemetry Metrics

Instant calculation of Total Distance (1,414 km), Drive Time (22.5 hrs), Diesel Volume (385 L), and Fuel Cost (₹34,980).

Leaflet Geospatial Dark Canvas

Interactive route polyline, station markers, weather hazard indicators, and emergency trauma facilities rendered with 0ms client-side cache.

Strictly Single-Plane Viewport

Zero page-level scrolling prevents touch-target drift while in motion; responsive category tabs for Diesel, Dhabas, ER, and Mechanics.

Graph-Theoretic Dynamic Programming Solver

Single-routing call efficiency replaces naive multiple routing requests with geometric projection and linear-time DAG optimization.

1. Station Polyline Projection

Projects geocoded fuel plazas onto the route polyline using local flat-plane Euclidean coordinates:

$$t = \max(0, \min(1, (S-A)\cdot(B-A)/||B-A||^2))$$

Stations exceeding 5.0 miles corridor tolerance are discarded; candidates are indexed by cumulative route mile marker.

5-Mile Corridor Pruning

2. Forward-Only Reachability DAG

Candidate nodes bounded by Origin (0.0 mi) and Destination (Total mi) form an ordered topological sequence:

$$N0 < N1 < N2 < \ldots < Nk$$

Directed edges are added only if mile(u) < mile(v) and distance ≤ 500 miles. Topological monotonicity guarantees an acyclic graph.

Range Limit ≤ 500 Miles

3. Linear-Time DP Solver

Solves the global cost-minimization problem in O(V + E) time:

$$cost[v] = \min(cost[v], cost[u] + g \times price[u])$$

If cost[Destination] = ∞, the platform immediately raises HTTP 422 Unprocessable Entity, preventing vehicle fuel exhaustion.

< 1ms Solver Complexity

Interstate Fuel VAT Arbitrage

Capturing significant fuel cost margins through intelligent border refueling recommendations across Indian National Highways.

Daily 6:00 AM OMC State VAT Benchmark Rates

State / Corridor	Diesel (₹/L)	Tax Tier	Arbitrage Strategy
Delhi NCT (Origin)	₹87.62	LOW	Ideal entry fill point
Haryana (Rewari)	₹88.35	LOW	Tank up before Rajasthan
Gujarat (Surat / Vapi)	₹90.10	MEDIUM	Fill 100% prior to MH border
Rajasthan (Jaipur)	₹91.25	HIGH	Avoid major top-ups
Maharashtra (Mumbai)	₹92.40	HIGHEST	Highest VAT corridor terminal

Daily 6:00 AM Automated Revision Feeds

Commercial Fleet ROI: Case Study

For a regional freight operator running **50 commercial heavy trucks** on the Delhi → Mumbai corridor (average 6 trips per truck per month):

AVERAGE SAVINGS PER TANK FILL

₹1,420

Diesel differential between Gujarat (₹90.10) and Maharashtra (₹92.40) on a 400L tank.

Monthly Tank Fills (50 trucks × 6 trips):	**300 Refills**
Net Monthly Fuel Cost Savings:	**₹4,26,000 / month**
Annualized Fleet Profit Increase:	**₹51,12,000 / year**

Disha: Multilingual AI Voice Assistant

Engineered specifically for truck drivers in transit: low cognitive load, native Indic speech models, and zero hallucination.

Strict Native Language Isolation

Disha strictly isolates vernacular vocabularies without language mixing, utilizing native acoustic speakers powered by **Sarvam AI** and **AWS Bedrock**:

Hindi (aditya_hi_conversational)
"[illegible] 75 [illegible] [illegible] IndianOil Swagat [illegible], [illegible] [illegible] ₹88.35/L [illegible]"

Tamil (gokul_ta_narration)
"[illegible] 75 [illegible].[illegible] [illegible] [illegible] [illegible] [illegible], [illegible] ₹88.35/L."

Telugu (kavitha_te_conversation)
"[illegible] 75 [illegible].[illegible] [illegible] [illegible] [illegible] [illegible], [illegible] [illegible] ₹88.35/L."

EN **English (simran_en_automobile)**
"Nearest pump is IndianOil Swagat 75 km ahead at ₹88.35/L. Safe journey!"

Grounded Context & Zero Hallucination

Unlike generic conversational LLMs, Disha is grounded directly in verified highway database telemetry before responding:

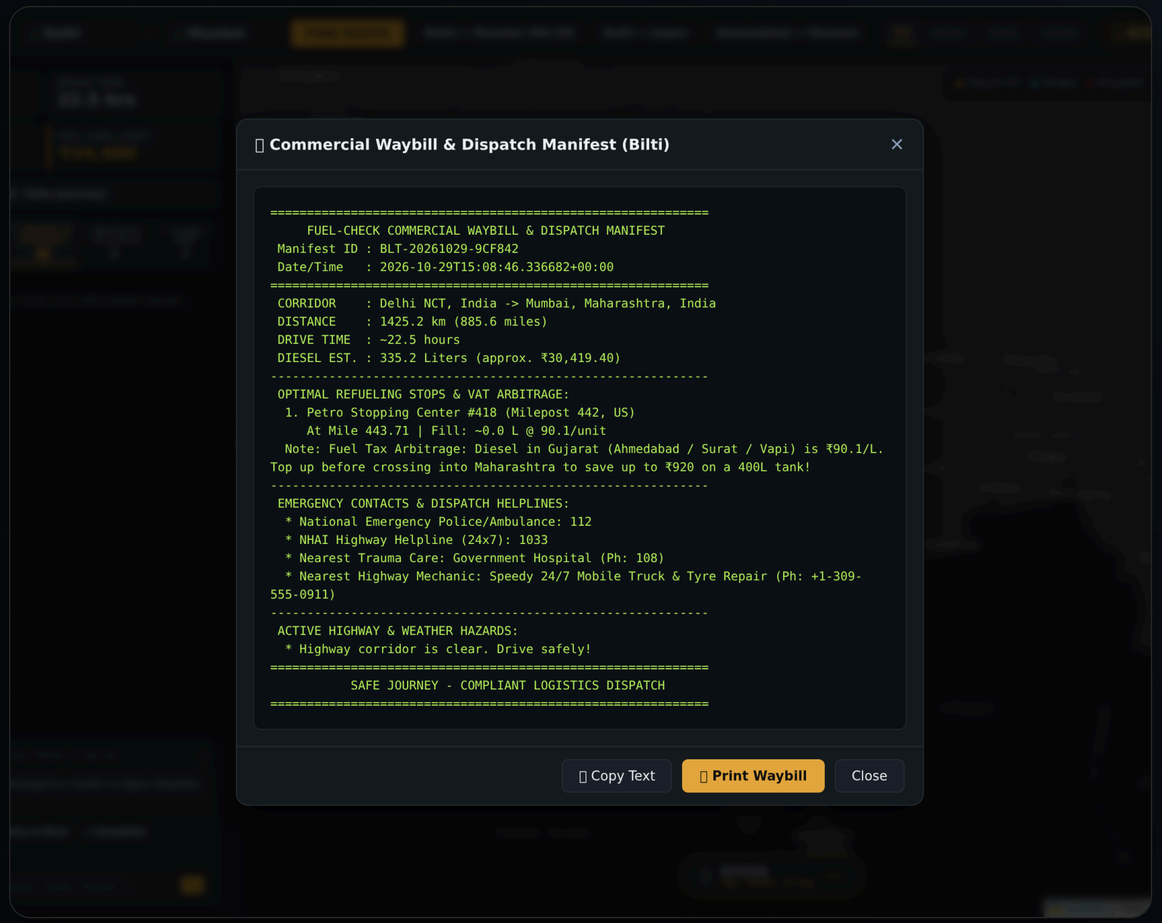

Deterministic Highway Truth
Prompts inject exact vehicle mile markers, active road closures, and live fuel prices.

Zero LLM Cost on Clear Roads
Deterministic multilingual rules trigger for standard conditions; expensive LLM calls occur only when conversational nuances or hazards require it.

Bolna Telephony Agent Webhook
Direct webhook integration (`/api/v1/bolna/webhook/`) enables autonomous in-cab voice telephony and automated dispatcher calls.

Digital Bilti Waybill & Emergency Hotline

Standardizing commercial freight consignments while providing drivers with immediate trauma and breakdown response.

Standardized Digital Consignment (Bilti)

Generates unique consignment IDs (`BLT-YYYYMMDD-XXXXXX`) aggregating total km, diesel volume, state tax savings, and active weather hazards.

80-Column Thermal Printer Ready

Generates monospaced ASCII waybill slips directly compatible with cab thermal printers and mobile Bluetooth receipt devices.

National Emergency SOS (112 / 1033 NHAI)

One-tap emergency trigger transmits driver GPS coordinates directly to Highway Police, NHAI Breakdown vans, and local trauma centers.

Corridor Amenity Integrations

Dedicated micro-services for verified Dhabas (shower/bed), 24/7 Mobile Puncture mechanics, and parcel warehouse checkpoint confirmation.

Cloud Architecture & Zero-Key Readiness

Serverless container deployment on AWS Lambda with automated GitHub Actions CI and multi-tier sub-second caching.

Serverless AWS Lambda

Packaged as an automated container image deployed on Amazon ECR + AWS Lambda with AWS Lambda Web Adapter (LWA):

- Public HTTPS Function URL with zero API Gateway overhead.
- Auto-scales from 0 to thousands of concurrent requests.
- Lean Gunicorn WSGI runtime optimized for 1024MB memory.

One-Click deploy_lambda.sh

Multi-Tier Caching Pipeline

To guarantee sub-second responses and prevent external rate limits:

- **Client LRU Session Cache:** Instant 0ms response in browser for repeat queries.
- **SHA-256 Memory Cache:** In-memory route caching with `X-Cache: HIT` responses in **0.06s**.
- **Decoupled Async TTS:** Audio synthesizes on-demand without blocking route calculations.

0.06s Cached Latency

Zero-Key First Architecture

Engineered to operate 100% out of the box with zero paid API keys:

- **Routing:** Free OSRM road network.
- **Geocoding:** OpenStreetMap / Nominatim.
- **Weather:** Open-Meteo checkpoint models.
- **Enterprise Switch:** Seamlessly enables Amazon Location & Sarvam AI via .env flags.

Zero Setup Friction

Validated Rigor & Live Platform Access

Fuel-Check is fully verified, tested, and actively running live in production.

Production Verification Highlights

69 Automated Unit & Integration Tests Passing
Verified across geometry normalization, DAG reachability, weather models, and API resilience in 4.1s.

National Highway 48 Validated (Delhi → Mumbai)
1,414 km corridor successfully modeled with verified Gujarat/Maharashtra border tax arbitrage saving ₹1,420.

Zero-502 Latency Optimized
Uncached execution time reduced from ~30s down to 2.3s through decoupled non-blocking speech synthesis.

Access the Live Platform

Experience the interactive driver cockpit, test multimodal voice queries, and generate commercial waybills live:
